

Downloading YouTube Videos

Introduction

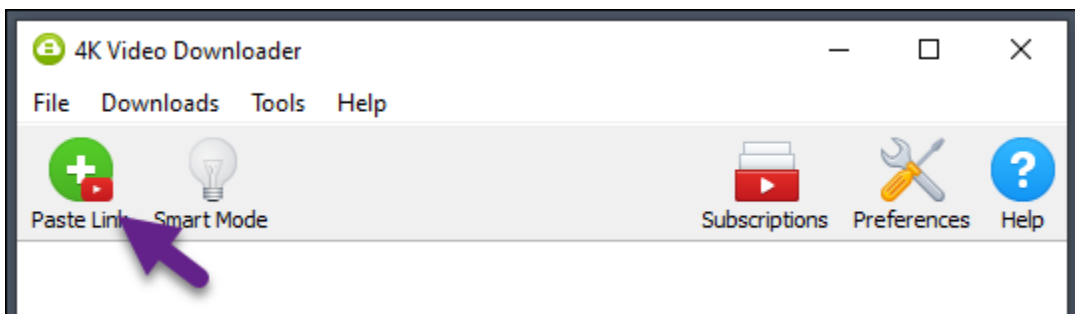

For this tutorial I'm using Firefox to view YouTube videos and a program called 4k Video Downloader available for free [here](#). The paid version (&15) offers more features and can be seen [here](#). This tutorial works with any browser.

Here are the steps

- Download and install the 4K Video Downloader program
- Open your browser of choice
- Find a YouTube video that you want to download
- Select and copy the contents of the address bar as shown below. You can copy the address by right-clicking it.

- Open the 4k Video Downloader and click the green plus sign as shown below.

- Click the download button to complete the process. Note – you can use the Browse button to save the downloaded video to any folder.
