Introduction

These quick tips will be updated periodically with the most recent tips at the beginning.

Make anonymous calls (added 12/14/17)

Go to Settings, Phone, Show My Caller ID. You can turn this off to make an anonymous call. Don't forget to turn it back on.

Ring Tones

To choose a Ring Tone for a contact, go to the contact, click Edit and scroll down to Ring Tone. Tap it to select a custom Ring Tone.

Wallpaper

To change you Wallpaper go to your Photos app and select a photo. Tap the Share icon and scroll across until you see Use as Wallpaper. You can choose to set it as your Lock Screen or Home Screen or both.

Check your device storage

Go to Settings, General, iPad or iPhone Storage. From here you can see which apps are taking up your storage.

To check your iCloud Storage

Go to Settings and tap your name at the top. Tap iCloud and tap Manage Storage. From here you can tell what's using your iCloud storage.

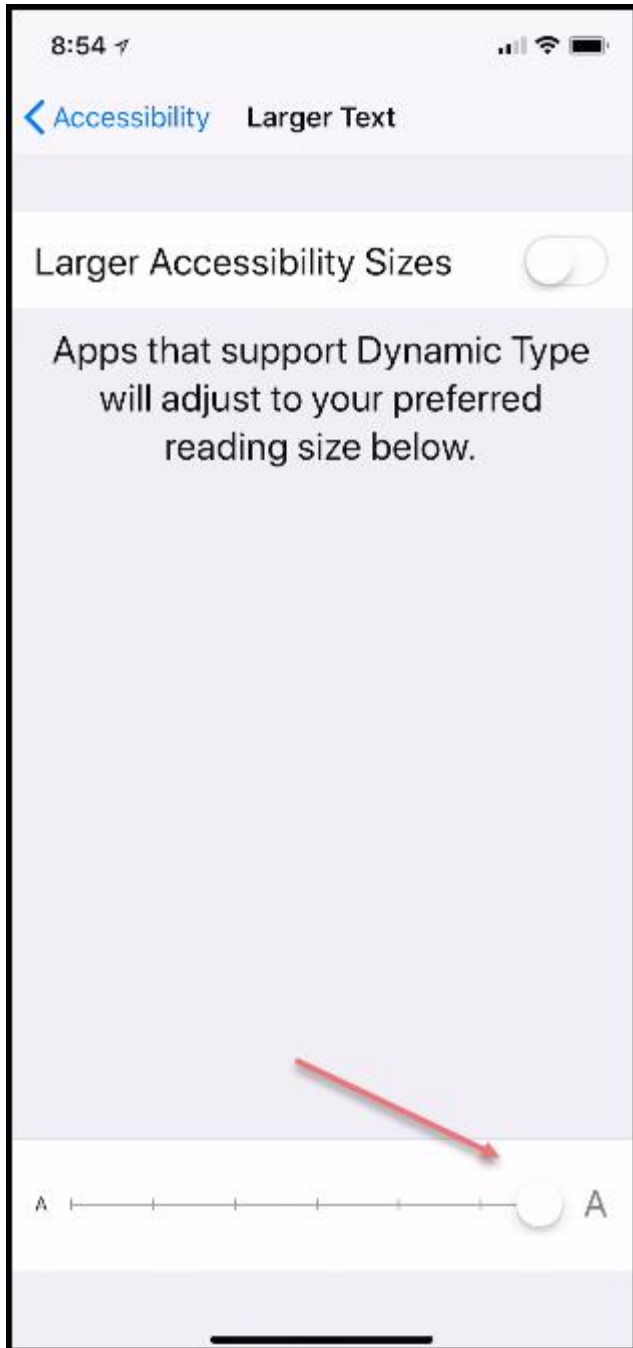

Remove entry from “Recents” in Email or Texting

Start typing a name in the address box in an email or text. When you see an entry you no longer want, tap the *i* as seen below and tap Remove.

Increase the font size on your device

Go to Settings, General, Accessibility and scroll down to Larger Text. Drag the icon at the bottom to the right for larger text.

Add a caller as a contact or block them.

Open the phone app, tap Recents at the bottom, tap the i next to a number and you'll see the choices as shown below.

To unblock a caller

Go to Settings, Phone and tap Call Blocking & Identification. Tap Edit at the top and remove any caller from the blocked list.

Using the new iOS11 Drag and Drop

See the information [here](#).
